

D9241A Sensor

30 kHz Frequency

Acoustic Emission Sensor

Description and Features

The D9241A is a high sensitivity, low resonance frequency, low noise sensor with a differential output. It has very good EMI shielding ability.

Featuring a rugged stainless steel cavity, ceramic face for sensor ground isolation and integral cable with differential BNC connector, the D9241A provides high common noise rejection and low noise, even in electrically noisy environments.

Applications

The sensor can be used in any place that requires sensor to have very good EMI shielding, low frequency and high sensitivity. One of typical application for the sensor is to monitor big power transformers.

Frequency response of the D9241A. Calibration based on ASTM E1106; Calibration based on ASTM E976.
